

ABOUT ME

I am a young man passionate about living new experiences.

My passions include reading and sports.

EXPERIENCE

Personal projects

Due to my passion for computers I have created several personal projects. Most of them you can see in my github profile or on my website.

The ones I'm the most proud of are an accounting application I made for my mother's company to keep the invoices.

I also created a card game using TypeScript and WebSockets to play with my friends. It's inspired by UNO.

AWS

I was proposed to participate in the CV Skills contest, to prepare for this contest I had to learn how to use AWS.

Because of this I can now use AWS at an intermediate level. So I can do things like deploy a virtual network, an instance of a machine or configure access to services.

EDUCATION

Medium Technician in Microcomputer Systems and Networks

CIPFP Batoi

2023 - PRESENT

PROFESIONAL LIFE

Receptionist at the box office

I have worked as a receptionist at the box office at the Biocultura Barcelona 2024 fair.

Monitor

I have worked 1 month in a summer school as a monitor for children between 3 and 10 years old. For this I had to get the title of MAT monitor (EAJSAC/26/2023/MAT/2).

SKILLS

Programming

As I said, apart from what I have learned in class, I have learned to program on my own. These are the languages that to a greater or lesser extent I have some experience beyond a "Hello World".

Javascript/Typescript

C

Node Js / Deno

SQLite

Soft Skills

I am a member of a debate team. Together with them I have participated in several tournaments both in public speaking (where we gave a speech on a certain topic) and in debate (where we debated against another team on the chosen topic).

Thanks to this I have developed many soft skills such as public speaking, critical thinking and teamwork.

Server management

With what I have learned in the AWS course and what we have learned in class I have learned the basics of setting up a server.

Some of the projects I have done have been: using an ubuntu server as a router, configuring an http server on Windows Server or configuring an ftp service using ubuntu server as well.
